Efeturi Ogefere

Senior Product Designer & Team Lead | Design Systems | Fintech, EdTech, SaaS

Lagos, Nigeria | ogefere.efeturi@gmail.com | +234 907 184 1632 | Portfolio | LinkedIn

PROFILE

Senior product designer and team lead with 5+ years of experience designing digital products for fintech, edtech, and SaaS companies, from founding Easymunch, a food delivery start-up, to leading design at AIENAI, a UK AI and product consultancy. I take products from problem to market, often in place of a product manager: I shape the strategy, ground it in research, design the experience, and lead the designers who deliver it. I also build front ends with AI coding agents.

CORE SKILLS

Product design: User research, journey mapping, wireframing, prototyping, usability testing, interaction design, accessibility (WCAG AA), UX writing

Leadership: Team leadership, hiring, mentoring, design critique and review, client and stakeholder presentations, research-led prioritisation, Agile delivery

Design systems: Design tokens (DTCG), Figma variables, component libraries, theming, documentation

Front-end and AI: HTML, CSS, Tailwind, React, Next.js, and TypeScript built with AI coding agents (Claude Code, Codex); LLM features, multi-agent workflows, MCP, n8n

Tools: Figma, GitHub, Vercel, Playwright, Framer, Webflow, Adobe Creative Cloud

EXPERIENCE

Senior Product Designer & Team Lead

AIENAI | London (Remote) | June 2023 – Present

Product work

- Led 7 products end-to-end, often without a product manager: set product direction, scoped features, and shaped strategy with founders and clients, then worked with the research team on discovery and took the work from journey mapping to high-fidelity UI, building the front ends for 4 of them with AI coding agents (Claude Code, Codex) from written specs and architecture decision records.
- Circuitmind (London): led the redesign of the version 1 product, an AI circuit design tool, including onboarding and the workspace; week-one activation rose from 29% to 62%, time to first design fell from 47 to 18 minutes, and trial-to-paid conversion doubled. The company has since raised US$900k.
- Rhapsody of Realities: led the redesign of a daily devotional app around today's reading; week-one retention rose 27%, average sessions grew from 3.2 to 5.8 minutes, and the Play Store rating climbed from 3.6 to 4.5.
- OutOut: set the product direction for version 2 of a group outings app, led 2–3 designers, and built its front end with AI coding agents, from kick-off to pilot in 10 weeks; 20% more new users now reach a first event, and 100+ pilot users rate it 4/5.
- AXE LMS: designed the learning platform and co-built its Next.js, React, and TypeScript front end with an engineer, owning the learner app, assignment submissions, community forum, and verifiable PDF certificates in a 56-route, multi-tenant product with CI checks. Built in 6 months, it secured funding and is in pilot with 30 students and 2 tutors.
- Fintech vault: owned the React and TypeScript build used as the design source of truth for the Flutter and web versions of an encrypted digital-legacy product, including its motion system and multi-step flows; code-splitting cut the first load by 79%.
- Cross-border parcel marketplace (Flutter): led design and defined its design system, from tokens to components and patterns.
- MHCI consultancy: built and shipped a 17-route Next.js and Tailwind marketing website, solo, from static mock-ups to Vercel production across 4 months of iteration.

Leadership

- Lead a team of 4 designers and developed every one, including 3 juniors, to own a product end-to-end against design standards I set; I now give direction and hold the quality bar across their work.
- Took design alignment off the founder, who had reviewed the team's work almost daily: replaced those reviews with twice-weekly rituals I run, Monday planning and Friday sprint reviews where the whole team critiques each other's work, cutting revision rounds and spreading knowledge across products.
- Played a key role in hiring my current design team. For clients, led designer hiring at C54 News, sat on its panels for other technical roles, and served on hiring panels for the Government of Barbados.
- Run usability tests and analytics reviews to prioritise improvements, and present work to clients and cross-functional teams within Agile sprints.
- Mentored 40+ students across 6 countries in UX design through AIENAI Academy.

Product Designer

Heckerbella Ltd. | Lagos | August 2022 – 2023

- Designed 6 web products end-to-end across healthcare, HR, education, and property, from discovery and wireframes to high-fidelity UI, then worked with engineers through build, QA, and release.
- Designed the company's hospital and HR management systems (Heckercare, Hecker People), turning dense operational workflows into clear, task-focused interfaces for hospital and HR staff.
- Designed a social learning platform for JA Africa, a pan-African youth education nonprofit, and a facility management system for Eko Development Group.
- Used product usage data to guide layout decisions that lifted conversion by 12% and cut support requests by 25%.
- Led the redesign of Heckerbella's website, where cleaner navigation grew traffic by 40%, and designed the University of Lagos website.
- Built a shared Figma component set used across products and applied usability findings that cut development iterations by 20%.

Founder & Product Designer

Easymunch | Benin City | 2021 – 2022

- Founded a three-sided food delivery marketplace and designed each side of it: the customer ordering website, the restaurant vendor tools, and the rider delivery experience.
- Launched in Benin City and onboarded 9 restaurants before the business closed in 2022.

PERSONAL PROJECTS

Design Engineer

SyncSalez | Lagos | 2025 – Present

- Built the SyncSalez Global Design System: 103 React components, 1,255 icons, and 471 DTCG design tokens that build to CSS, JavaScript, React Native, and Figma variables, with automated WCAG AA contrast checks.
- Wrote the product's UX writing system: voice and tone, a controlled vocabulary, and copy patterns for 26 interface surfaces.
- Ask Studio: designed and built a guarded AI sales assistant with a safety classifier, multi-model fallback, and rate limiting.
- Tenfold: designed an 11-agent AI marketing team for merchants with approval gates, budget caps, and 3 autonomy modes, and built its prototype, covered by 130+ automated tests.

EDUCATION

B.Sc. Electrical/Electronics Engineering | 2022
University of Benin
